

Away Cell Manager:

This job requires you are certified L2 or higher and have familiarity with larger rockets (Most will be 20 lbs or more and will use an “L” or higher motor)

An Away Cell Pad Managers first job is to ensure all the pads are safed before flyers are allowed to start loading rockets. Do this by de-activating the launch boxes. Once the area is safe and the *Range Boss* has allowed the flyers out to the away cell pads, the Away Cell Pad Manager helps the flyers load and set-up their rockets. Once the area is clear and the *Range Boss* has given the go-ahead, the launch boxes can be armed.

This job is great for those with L2 experience who want to help out with larger projects to gain some experience.
