

Range Boss:

The Range Boss needs to be level headed while providing senior leadership on fast moving Field Operations. This position needs to be in constant contact with what is going on in the Field, from the pads to the LCO desk. He/She will coordinate a smooth flow of flyers to available pads so we avoid problems like somebody standing in a line assigned to the Extreme Rail/ High Power Pads with a Standard Rail/Mid-power rocket. Range Boss will stage fliers, pre-assign pads, collect the Flight Data Cards for the LCO and lead the Pad Managers in executing the job of Field Management. Finally, the Range Boss will announce to the LCO when the "Pads are Cold" and when a side of the Field is ready to Launch.

The Pad Managers will assist the flyers at the pads, while the Range Boss will stay at the passage-way out to the pads so that all flyers must go through the RB.

The Range Boss needs to make the final call on closing off a side from loading and progressing to "Launch Ready State". Sometimes, this might mean instructing people to wait until the next side opens up for loading.

Will it be hectic?? Will you need to keep your cool under pressure?? You bet, but we know there are those of you who are good organizers, work well with people, are quick thinkers, and are observant about what is going on around them.
